

Green light, low cost Solid Carbide Tool Kits

Drill and Tap Kits

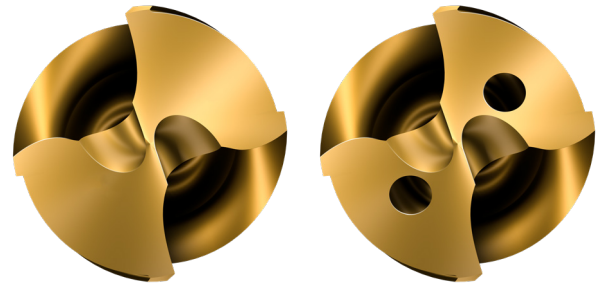

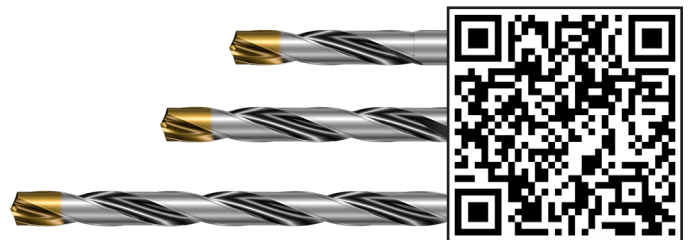

Each kit includes 2 drills and 2 taps of the same type and size. Scan the QR code for the full offer.

CoroDrill® 860-GM

With excellent chip evacuation in long and short chipping materials, CoroDrill 860 provides green light machining at high penetration rates in a wide range of materials and applications.

- Excellent stability, machining security and improved tool life with high MRR
- Polished flutes provide better chip evacuation and help reduce heat build-up in the tool
- The robust design significantly improves finished hole tolerance and quality
- Reduce stock holding and achieve greater machine flexibility with reduced set-up time

Available in 3, 5, 8 x D with through-coolant options

CoroTap® 100

Straight flute taps that are optimized for short chipping cast iron, stainless steel and hardened materials. Suitable for through and blind holes.

- Excellent thread quality and wear resistance resulting in fewer machine stoppages and reduced cost-per-hole

CoroTap® 200

Spiral point taps for through holes designed to push the chips forward in multiple materials, offering high flexibility and cost efficiency.

- High process security and increased resistance to edge chipping leading to fewer breakages

CoroTap® 300

Spiral flute taps suitable for tapping in blind holes up to $3 \times D$. There are different helix angles suitable for different applications across many materials.

- The spiral flute design secures a constant rake angle and gives a consistent cutting process

CoroTap® 400

High-speed, chip-free forming taps suitable for both through- and blind-holes in steel, stainless steel, aluminium and HRSA's.

- Significantly improved tool life, meaning lower tool consumption and reduced tool inventory
